**BATTERY
TERMINAL
SEALER**

LONG TERM FLEXIBLE COATING
GIVES LASTING PROTECTION OF
BATTERY TERMINALS, CABLES,
CARRIERS & CLAMPS

MEETS MIL SPECS MIL-C-16173D-GRADE 4
AND MIL-C-83933A

Product # 1156 Aerosol

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

Battery Terminal Sealer

Battery Terminal Sealer is a flexible, non-tacky, dust resistant, translucent coating designed to insure long lasting protection for your vehicle's battery. **BATTERY TERMINAL SEALER** will not crack, peel, flake or chip over a wide temperature range (-40° F to +175° F). **BATTERY TERMINAL SEALER** seals and protects not only battery terminals but also the cables, clamps, hold-downs and the battery case itself. Protect your power system against the effects of weather, corrosion, harsh detergents, and acids simply by spraying entire system with **BATTERY TERMINAL SEALER**. Can be easily removed with solvent or mineral spirits.

**MEETS MILITARY SPECIFICATIONS:
MIL-C-16173D-GRADE 4 & MIL-C-83933A**

DIRECTIONS FOR USE:

Remove dirt, corrosion and other deposits and make sure surface is clean and dry. Coat terminals and cables with a thin, uniform film. Allow approximately 5 minutes to set-up. If second coat is desired, wait a few minutes before applying. Total cure is after 2 hours. To remove coating simply wash off with mineral spirits, citrus solvent or any solvent type cleaner.

Additional Information

No matter how expensive, sophisticated, or state-of-the-art your vehicles may be they generally won't work with a dead battery. Batteries aren't complicated but they do require proper maintenance. Keeping your batteries clean and free from corrosion, in many environments, can be a full-time job. Not any more. **Battery Terminal Sealer** protects batteries from dirt and corrosion for an extended period of time. This makes the job of maintaining vehicles just that much easier and less time consuming. Normal weather conditions will cause battery terminals to corrode quickly and in harsh environments this process is many times faster. Spray **Battery Terminal Sealer** on new as well as existing batteries to protect them from weather conditions, moisture, harsh chemicals and acid. Spray the terminals, cable connections at both ends, clamps and hold-downs. Detergents mixed into pressure washers are generally alkaline based. While cleaning vehicles small amounts of soap can seep into unsealed batteries causing the power cells become neutralized and the battery no longer usable. Coating all your batteries with **Battery Terminal Sealer** will drastically reduce this potential problem.
