EX-RAY Q
X-Ray & Photo Development Equipment Drain Cleaner

USE AT: HOSPITALS, CLINICS, OFFICE BUILDINGS, DENTAL OFFICES, ANYWHERE X-RAY OR PHOTO EQUIPMENT IS USED SAFE ON P.V.C. & ALL PLUMBING

Product # 3052 Quarts

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

EX-RAY Q

X-Ray & Photo Development Equipment Drain Cleaner

EX-RAY Q, an X-Ray & Photo Development Equipment Drain Cleaner, is new technology developed by American Industrial Supply to clean out slow flowing or plugged drains. **EX-RAY Q** contains

sodium bisulfate that is part of a slow acting chemical complex to be used as part of a preventive maintenance program. If a blockage occurs, it may take some time to open drains. Small frequent treatments work best.

DIRECTIONS FOR USE:

The frequency and quantities of **EX-RAY Q** required for a given location can only be determined by trial and error. While dilute mineral acids work much faster, these materials present significant handling and storage problems.

INGREDIENTS
SODIUM BISULFATE

CAS NUMBER
7681-38-1

Additional Information

EX-RAY Q is a necessary addition to a proper preventive maintenance program at any facility that uses x-ray or photographic developing equipment. The development process flushes a high quantity of dissolved minerals such as silver down the drains. The minerals will begin to form scale on the inside of the plumbing pipes and rapidly build up to a level where stoppages occur on a regular basis. The only effective method of keeping the drains free-flowing is preventive maintenance using **EX-RAY Q**. Other more dangerous chemicals may increase the flow of the drains once plugged, but **EX-RAY Q** dissolves the buildup that is the source of the problem without the hazards associated with other treatments. Small dosages of **EX-RAY Q** once or twice a week (depending on the volume of film processing) will eliminate inconvenient drain problems. For more information contact your local **Superco Specialty Products** representative.
