ST. AUGUSTINE & BERMUDA GRASS FOOD Granular Fertilizer will rejuvenate old lawns and increase the spreading and greening of all lawns when used as directed. Derived from ammonium phosphate, urea, triple super phosphate, potassium chloride, sulfur and sulfates of calcium, iron, zinc and manganese, **ST. AUGUSTINE & BERMUDA GRASS FOOD** is one of the most advanced formulas on the market today.

DIRECTIONS FOR USE:

Lawn should be mowed first. Apply fertilizer evenly with spreader. During fertilizer application, the leaves should be dry and soil moist. Water fertilizer thoroughly into the soil with a medium spray from a hand held nozzle.

Existing Lawns: Apply 15 pounds per 2000 sq. ft. every 10 to 12 weeks. First application should be made in March to break the dormancy of Bermuda and St. Augustine grasses.

Developing New Lawns: Apply 15 pounds per 2000 sq. ft. every 6 weeks (six times a year). First application should be made in March to initiate new growth.

Preparing New Lawns: After soil has been prepared and leveled, broadcast 1 pound per 100 sq. ft. (10' x 10') evenly onto surface. Sow seed and cover with lawn spread. Water lawn with fine mist until top 4 inches of soil is saturated. Do not let water run off. Surface should be kept moist until grass begins to grow.

Spreader Settings:

SCOTTS (7) CENTRAL (5½) LAWN BEAUTY (6)
PAX (5½) SEARS (6)

Additional Information

Nothing makes a property or park look better than a beautiful lawn. Turf researchers have shown that N:P:K, when fed at 2:1:1 ratio produce the most attractive and healthy lawns. Small amounts of nitrogen and phosphorus will not be available to grasses due to leaching and immobility in the soil, so we put extra nitrogen and phosphorus into **ST. AUGUSTINE & BERMUDA GRASS FOOD** to offset these losses. **ST. AUGUSTINE & BERMUDA GRASS FOOD** is rich in nitrogen and sulfur, which are responsible for greening lawns. High phosphorus content with other nutrients will provide energy to promote rhizomes (new plants), so newly seeded lawns will spread and will fill up faster. Old lawns will become thick, plush and healthy looking. Rhizomes will also reduce thatch in the old lawns. Give your lawns the attention and the nourishment they deserve, use **ST. AUGUSTINE & BERMUDA GRASS FOOD**.
