## STORMY

### Temporary Roof Repair Material

**STORMY** is a specially treated mineral compound for temporary or emergency top-sealing of small leaks in flat built-up roofs. **STORMY** is not a waterproofing agent or a permanent repair method but will temporarily stop small leaks in built-up flat roofs until a permanent roof repair can be applied.

#### DIRECTIONS FOR USE:

Pour approximately a ½ inch blanket of **STORMY** over suspected area of roof leak. If leak does not cease immediately add more until it stops. **STORMY** can be applied through standing water if poured slowly and carefully. Because **STORMY**

forms only a temporary patch, a permanent patch should be applied as soon as possible using **SUPERCO's FIBER KOTE**. When the roof surface is completely dry, sweep up any residue remaining from the **STORMY** before you apply permanent roof repair. Be sure to remove residue from roof because the reintroduction of

water can reactivate this material to again form an extremely slippery surface.

INGREDIENTS	CAS NUMBER
BENTONITE CLAY	1302-78-9
CRYSTALLINE QUARTZ	14808-60-7

## Additional Information

**STORMY** Temporary Roof Patch Material can save your company from potential loss resulting from water damage caused by roof leaks. Built-up flat roofs can be found on most commercial, office and apartment buildings, hospitals, shopping centers, maintenance shops and warehouses. Any of these facilities is susceptible to leaking roofs and most maintenance people will agree that it is just a matter of time before their roof will leak. Preventive measures certainly help but will not change the inevitable. When the roof does leak, someone has to fix it fast because with every minute that passes more damage is done inside the building. Electrical equipment like computers and other office machines are particularly vulnerable to water damage and are also very expensive to replace. **STORMY** stops leaks in built-up roofs within minutes after application plus it is not necessary that you know exactly where the leak is coming from. One person can go up on the roof in the middle of a downpour and apply **STORMY** in a minute or two, stop the leak and be out of the rain quickly. No one likes to repair roofs during a rain storm and most roofing contractors will charge a premium fee if they will come out at all. **STORMY** not only stops leaks faster than any other method, it also helps find the leaks for you to repair later. After the rainy weather passes, and the roof is dry, you will be able to locate the leak easily by looking for spot where the **STORMY** collected. Then simply sweep away the residue and apply a permanent patch using **SUPERCO's FIBER KOTE, FIBER SEAL** or **A LINE** products. For large areas, consult your local representative for information on **SUPERCO's SELF ROOFING SYSTEM**.
