- TIDY WELD**
Welder's Anti-Spatter Spray
- Prevents spatter build-up on gun nozzles, contact tips and metal parts.
 - Provides cleaner, neater welds.
 - Extends life of welding tips.
 - Allows surface to be painted after welding.

DIRECTIONS FOR USE:
Spray a light film on both gun tip or nozzle and area to be welded. Tap tip or nozzle frequently to eliminate spatter build-up. If surface is to be painted, wipe surface with rag soaked in degreaser to remove any loose film.

INGREDIENTS	CAS NUMBER
1,1,1,-TRICHLOROETHANE	71-55-6
CARBON DIOXIDE	124-38-9

Additional Information

TIDY WELD Anti-Spatter Spray is a unique product that makes welding neater, cleaner and makes the cleanup of welded parts easier. **TIDY WELD** is sprayed onto the nozzle and on the work area prior to welding and this non-silicone coating provides several benefits to the welder. **TIDY WELD** eliminates the need for chipping or scraping to remove welding spatter and prevents damage to the metal surface caused by flying weld spatter. This protection means that after the welding is finished the worker does not have to spend excess time cleaning and scraping nor will the worker have to redo the work as a result of spatter damage. This tremendous labor savings can improve the efficiency and productivity of virtually any welding operation. **TIDY WELD** keeps both MIG and Gun Nozzles from clogging thereby providing cleaner, neater welds and also extends the life of the tip. Treated surfaces may be painted after simple cleanup, no need to sandblast or hot-tank dip parts after using **TIDY WELD**. For a demonstration of this remarkable product contact your local **SUPERCO** representative.
