

The YES Company!!

TERMINATOR
One-Shot Drain Opener
with Odor Blanket

INDUSTRIAL STRENGTH
BI-PHASE DRAIN
OPENER
AND MAINTAINER

Product # 7064

FOR PROFESSIONAL USE ONLY
CONSULT LABEL AND MSDS BEFORE USING.

TERMINATOR is a bi-phase drain opener that works fast and will not harm plumbing pipes or fixtures. **TERMINATOR** features an inhibited acid that is safer to handle than conventional acidic drain openers combined with a proven grease gobbler that also acts as an odor masking agent. This bi-phase formula makes **TERMINATOR** the most advanced product of its type.

DIRECTIONS FOR USE:

Attention: Wear acid-resistant face shield apron and gloves. Product could react violently with some materials, causing gases & hot acid to spray back out of drain. Never use product in drains after, with, or before hot water, other drain openers or other chemicals. Do not add water to acid. Do not pour into standing water or a completely stopped drain. Never use with plunger.

Empty entire contents into drain and quickly cover opening with a deep container to shield against any splash-back. Refasten cap tightly on empty bottle, wrap in several layers of paper, and discard in trash. Wait 15 minutes, then clear drain of acid by flushing with a large amount of cold water. Repeat treatment if necessary.

ORTHODICHLOROBENZENE	95-50-1

Additional Information

Clogged drains is a problem that troubles every business and facility at some or another. Having an effective drain opener can save you the excessive cost of calling out a plumber or drain service. **TERMINATOR** is perhaps the most effective drain opener you can get for a number of reasons. Most severe drain clogs result when a variety of debris get stuck together with grease, body oils and soap scum, all grease based wastes that act like glue and clog up your drains. **TERMINATOR** contains a powerful solvent that breaks down grease instantly and permanently. The unique sulfuric acid in **TERMINATOR** burns up paper products, diapers, sanitary napkins, filter tips from cigarettes, etc., without harming the pipes or fixtures. **TERMINATOR** is packaged in one-shot pint bottles for extra safety and convenience. **TERMINATOR** is safe on all types of plumbing; copper, galvanized, PVC, zinc and brass. A simple way to demonstrate the difference between **TERMINATOR** and other sulfuric acid drain openers is to pour a little of each into two Styrofoam cups, activate the acid with some water and set them into a sink. Styrofoam is made from a grease based material and simulates the grease clogging a drain. **TERMINATOR** dissolves the cup instantly while the other product has no effect at all not to mention the awful rotten-egg smell the other products make. Use **TERMINATOR** where other products have failed or proved unsatisfactory.
